

Battery model

Operating instructions

Press the Start button and turn on the taps in the usual way.

Water will flow from the shower and the **Green light** will flash every 5 seconds.

When there is 2 minutes remaining, the beeper will sound two beeps.

When there is one minute remaining, the beeper will sound once and the light will change from green to **Amber colour**, flashing every 5 seconds.

With 30 secs remaining, the amber light will begin flashing more and more frequently.

With 10 secs remaining the beeper will sound and the light will change from amber to **red colour**, flashing every second.

The beeper will sound every one of the last five seconds.

The water will be cut off for the duration of the waiting time.

While waiting, a **Red light** will flash every 10 seconds in the **left side** of the display.

At the completion of waiting time, the beeper will sound once and the shower is ready to go.

Battery warning

When the battery is approaching the end of life, a **Red light will flash** in the **right side**. You should replace the batteries with good quality Alkaline cells as soon as possible.

When the battery is almost expired, the solenoid valve will open and remain open so that the shower will be unrestricted.

Lithium batteries do not provide any warning before going flat. In any case. Lithium batteries are not suitable for this product.

We do not recommend re-chargeable cells because they are each 1.2 Volts giving a total voltage of only 7.2 Volts instead of 9 Volts.

We highly recommend Eveready Gold[®] Alkaline batteries be used.
